Polypal factory in Iurreta (Biscay, Spain)

Polypal

With more than 100 years of experience in this industrial sector, POLYPAL STORAGE SYSTEMS S.A. specialises in the design, manufacturing and installation of a wide range of storage solutions.

POLYPAL has subsidiaries in Germany, Belgium, France and the Netherlands, in addition to five offices in Spain.

POLYPAL's production facility is located in Iurreta (Biscay-Spain), only 30 km away from Bilbao, 25 km away from the international airport and 30 km away from the Port of Bilbao. The factory has a gross floor area of 10,000 m², in which modern equipment and technical resources are used by a team with vast experience, under a strict quality system with certifications by the ISO 9001, ISO 3834 and UNE-EN 1090 standards.

POLYPAL and the Whittan Group are members of different maintenance organisations:

Lockers

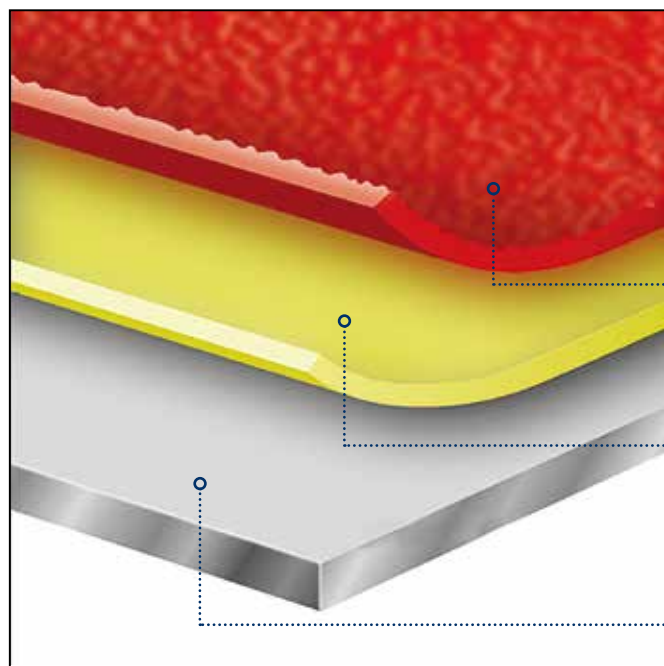

POLYPAL lockers are designed to be used in different environments and sectors, this guarantees that there is a locker for every need. They are characterized by their functionality and are fully configurable in sizes, colours, system of locks, type of doors or interior supports.

Functional and flexible solutions that make life more comfortable and safe.

Anti-microbial technology

ACTIVECOAT
Benefits from 99,9% reduction
in bacteria levels

All POLYPAL lockers have patented ActiveCoat protection. This anti-microbial technology, which is incorporated in the manufacturing process of the lockers, offers constant protection against bacteria, mould and fungi, potentially harmful.

This coating reduces the risk of cross contamination from surface to surface, helping to create a cleaner and more hygienic environment. Especially suitable when strict hygiene standards are required, such as in areas such as health, education, catering and clothing.

AC+IVE COAT

The hard wearing anti-bacterial powder coating for the most stringent hygienic environment.

Iron phosphate key coat:

This anti-rust, key coat bonds to the steel in readiness for the final active coating.

Prepared steel surface:

Chemical cleaning ensures an ideal surface for further coatings.

Quality as standard

The POLYPAL lockers have been tested and meet the BS 4680: 1996 standard regarding product.

In order to obtain compliance with the BS 4680: 1996 standard, the products have to fulfill key criteria covering dimensions, material, construction and finish, as well as locking, fittings and ventilation.

Metal lockers

The POLYPAL metal lockers for generic use are characterized by their versatility. Thanks to their designs and configuration options are an excellent way to store clothing, personal items and valuables, in areas such as education, health, industry or the service sector.

Robust design

- Doors have an all-round reinforcing edge to enhance strength and rigidity.
- A welded vertical channel stiffens the door for protection against impact damage

Hinge and closure

- Steel three-knuckle hinges are welded to the door and riveted to the frame to give added strength.
- A close fit between the door and the frame of less than 2mm protects against leverage in attempted forced entry.

Resistant colour

- Colours are applied electrostatically as an epoxy-polyester powder coat, then baked to provide a high quality, durable finish.

Locking

- Features in-frame locking through the door with a hooked cam engaging into the frame.
- This provides extra security by significantly increasing resistance to forced entry.

Anti-theft shelf

- The design of the intermediate shelf prevents access to compartments above and below an open door.

Lock plate

- The lock cover plate and handle provides recesses to accept compartment numbering or identification.

Standard locker

School lockers

With the height-adjustable POLYPAL metal lockers, all students, whether primary or secondary, can store their personal belongings safely.

This type of lockers, destined to store clothes, books, backpacks or equipment of the own study center, allows to customize the colour and the type of door, according to the furniture of the school.

POLYPAL has a range of fun colors that helps create creative school environments.

Laundry lockers

see options in page 17-18-19

The cleaning of work clothes in sectors such as food, chemical or sanitary, is key to meet health and hygiene requirements.

Dispensing lockers and clothes collectors are the optimal solution to remove used work clothes and restocking with laundered clothing.

This solution consists of a collector locker and a clothes dispenser locker. Employees deposit dirty clothes in the clothes collection locker through a mailbox. For its part, the laundry service accesses this locker by means of a key to collect dirty clothes, and once washed, places it in the dispensing locker, in the locker of each of the employees, who access with their own key to pick up clean clothes at the beginning of each new shift.

15 doors dispenser

- Allows access to all individual compartments simultaneously.

10 doors dispenser

Collector

- Galvanised anti-theft shelf, angled inside 'post slot'.
- Hooks for laundry collection sack (sack not included).

All POLYPAL lockers feature patented ActiveCoat protection. This anti-microbial technology offers constant protection against bacteria, mold and fungi.

Workwear lockers

see options in page 17-18-19

These types of lockers are specifically designed to store not only uniforms but also personal clothing within the same locker in the workplace.

These lockers have an internal distribution and door options to cover specific needs such as clean / dirty clothes compartments, hanging, crew lockers for bulky equipment, or two person lockers.

Uniform locker

- Fixed top shelf.
- Central divider.
- Hanging rail and hook.
- Three fixed shelves.

Clean and dirty locker

- Fixed top shelf.
- Central divider.
- Both divided compartments have a garment hanging rail and coat hook.

Two person locker

- Users have a three quarter length compartment with a separate full width compartment opened with the same key.
- Hanging compartment has two coat hooks.

Options metal lockers

Locks

Standard deadlock

This simple and economical cam lock provides user access with a small, easily replaced key. It's supplied with two keys and a master key is available.

Hasp & Staple padlock fitting

The user is required to secure the locker with a padlock (not supplied). This system provides flexibility at the loss of some control over allocation of lockers.

Coin/Token return lock

Ideal when lockers have 'shared' users. The key is released when coin/token is inserted. Key is captive again when the door is reopened as the coin/token is returned to the user.

Coin/Token retain lock

Generates revenue from 'shared' user lockers. The key is released when coin/token is inserted. Key is captive again when the door is reopened. Coin/token is retained in the box.

Digital combination lock

Battery-operated keyless lock. Can be programmed for dedicated single-user or multi-user "open access" mode. Personal entry code can be set and changed, whilst a master key ensures supervisor access.

Four tumbler combination lock

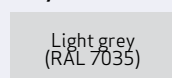

Ideal for facilities where keys are not desirable. The lock can be reset whenever it is open. This allows the locker to be used by several people at different times throughout the day. Master key for instant access and no fuss code reset.

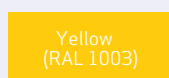

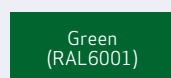

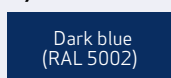

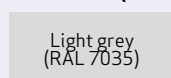

Magnetic lock

For use in Primary schools or environments where risk of key loss is high and security minimal. Offers positive closure of the door.

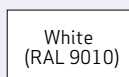

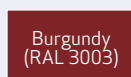

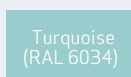

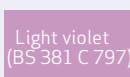

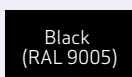

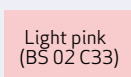

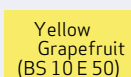

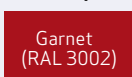

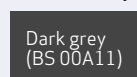

Body colour

Door colours (standard)

Door colours (no standard)

Options metal lockers

Doors

Standard door

- This flat mild steel door fits flush within the door frame
- Less than 2mm between door and frame to protect against leverage in attempted forced entry.

Reinforced door

An extra layer of steel to the door provides an additional element of strength and security for applications where locker wear and tear is high. The double-skin provides a stronger door with a near identical external appearance to the standard option.

Perforated door

Offers increased ventilation and allows contents of the locker to be visible from the outside of the door. Particularly useful where damp clothes and odours pose a problem.

Vision door

- Incorporates a toughened polycarbonate view panel set within a steel door with an all-round strengthened edge
- Allows you to see items stored in locker compartments without compromising security.

Insight door

These shatter proof polycarbonate doors allow 100% visibility while maintaining the highest level of security.

Accessories

Sloping tops for lockers

The 22 degree slope prevents litter being left on locker tops and makes cleaning easier. Essential in hygiene-sensitive locations such as hospitals and the food industry.

Support frame with seat

Seat units are incorporated into the locker frame as well as slatted seats to the front.

Bridge Unit for Modular Lockers

Bridge Unit Top

This is fitted to adjacent lockers with nuts & bolts supplied. Incorporates a central full-length hanging rail with the option of 'captive' clothes hangers which cannot be removed, thereby preventing theft and accidental loss.

Height mm	300	450	500	550
Depth mm	600	900	1.200	

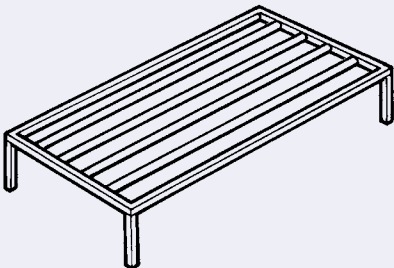

Support frame

Locker support frames and seat units raise lockers off the floor, reducing impact damage and making cleaning easier. Standard height is 150mm, and widths and depths are designed to match the locker installation.

Bridge Unit Base

A free-standing rack to support footwear or other items 150mm above the floor.

Small items lockers

see options in page 27

Having lockers to store personal effects in a safe way, prevents losses and makes workers not have to transport objects from their home to the company daily and vice versa, in the case of being installed in a work environment.

But these types of lockers can also be installed in public places such as shopping centers, airports, train stations, etc.
